

### ISTE-764 Project Management Activity 3

This will be a modified Delphi estimation exercise. Each of you should consider the purchase and setup of a new laptop for yourself. Assume you have already done the research and you know what type you wish to buy. Following is the top-level of a Work Breakdown Structure:

1. Purchase machine online
2. Set up machine with OS and basic configuration
3. Install applications and move data from your old machine
4. Decommission your old machine

Prepare a time estimate for this project and submit it to the dropbox for Activity 3a. Also submit it to your Group's Discussion area for Activity 3. You should then spend a few days discussing any variations with your groupmates. Finally, your group should submit one final estimate to the Activity 3b drobox.

The estimates you submit should be in the following format:

Step 1—Purchase machine online		
	1. <i>Do something</i>	1 hr
	2. <i>Do something else</i>	.5 hr
	3.	1 hr
	4.	1 hr
	TOTAL Step 1	3.5 hr
Step 2—Set up machine		
	TOTAL Step 2	hr
Step 3—Install apps		
	TOTAL Step 3	hr
Step 4—Decommission old machine		
	TOTAL Step 4	hr
Project Total		
	GRAND TOTAL	hr
